

State the problem or need & talk about how to fix it.

1. Investigate - The Issue

Investigating an Issue is about looking into a situation; considering its' history, and today. The purpose is to get an overview of what is going on – thinking about how a system is organised, managed and sustained; with a view to improve it.

OBSERVE –

- **How the system currently functions.**
 - **What makes the system work.**
 - **The business services that surround the system, and products offered.**
 - **Technology behind the product, and the various parts that it is made out of.**
 - **Who created the product, and their target market/s.**
