

Quickly design several ideas & get feedback from others.

5. Create - Concepts

Creating **Concepts** is about beginning to solve **The Issue** by drawing and modelling new ideas which compliment **The Brief**.

* Use feedback from **The Stakeholders** and information from your **Research** to roughly sketch out new ideas.

TIPS FOR CREATING CONCEPTS:

- Think about the future possibilities –
 - Make up an idea that could improve production, and draw all of the parts that show how the new solution works.
 - Use a pencil to sketch out a series of new ideas that could change the products' shape.
 - Reflect on the kinds of complaints that stakeholders had when you talked to them about the product, and try making up a new idea to fix it.
 - Quickly draw as many ideas as you can, then write notes beside each idea to explain what you were thinking.
